Denis José Mendoza Vidal.

Carrera 1C 2 #41C59, Barrio Bellarena, Barranquilla Atlantico,
Colombia, Cell: (+57)3044612480. **E-mail:** Denismendozavidal@gmail.com

About me

Ever since I learned people could create, communicate and developed web applications and websites to teach them how to full fill all sorts of duties while also getting them to interact in a responsive way with different type of users, I got hooked on everything programming related, since then, being a programmer, was more than a job, it became my passion and main source of motivation to keep learning and growing as a professional.

Background

I have a background in problem solving roles that require time sensitive and goal oriented decision making abilities while helping to keep high levels of motivation and engagement from myself, my teammates and subordinates

Skills

- HTML.
- CSS
- Javascript (Vanilla).
- React.JS

Experience.

1. My portfolio. It is fully responsive and it was built on HTML, CSS and Javascript (Vanilla) along with the help of a few external libraries for specific interactive features, please feel free to check it out. Netlify deployment: Netlify: https://denis-mendoza-portfolio-vanillajs.netlify.app/
2. Mock up ecommerce. It is fully responsive and it was built on HTML, CSS and Javascript(Vanilla). Main features, it allows you to add and delete items to a shopping cart having the final price changing based on the amount of items added, please feel free to check it out. (Disclaimer: It needs an actual buying function that should be added in the near future).   Netlify deployment: https://denis-mendoza-mockup-ecommerce.netlify.app/
3. Weather app: Fully responsive React.js project that leverages on API front-end consumption providing current weather conditions based on user's location with the condition that if location is not provided the app will not move beyond the loading page. Netlify deployment: https://denis-mendoza-apiusage.netlify.app/
4. Rick and Morty Project: Fully responsive, React.js project. Goal: The goal behind it was understanding more about how asynchronous requests and REST APIs work while

customizing the rendering to user's interaction with the app. Netlify deployment: https://denis-mendoza-api-usage-with-randm.netlify.app/
